EDUCATION

Monash University

Master of Science in Data Science

Melbourne, AU

August 2026

Relevant courses: Foundations of Data Science, Data Exploration and Visualisation, Statistical Data Modelling, Data Wrangling, Data Processing for Big Data, Applied Data Analysis.

University of Nottingham

Bachelor of Science (Hons.) in Computer Science with AI.

Nottingham, UK

July 2020

Dissertation Title: Common Chest X-ray Classification and Localization with Deep Learning

Relevant courses: Machine Learning, Computer Vision

WORK EXPERIENCE

tiket.com

Associate Data Scientist

Jakarta, ID

October 2022 - July 2024

- Improved image quality classification accuracy by 10% by integrating advanced OpenCV preprocessing techniques, leading to more reliable data inputs for machine learning models on GCP infrastructure.
- Analyzed user payment behaviors and identified key conversion bottlenecks, leading to the deployment of a CatBoost-based predictive model that boosted payment conversion rate by 4.8%, translating into an additional IDR 94 billion in gross booking value (GBV).
- Developed a CatBoost room grouping model through extensive feature engineering and similarity scoring, achieving 90% accuracy in hotel listing classification, significantly enhancing data reliability for downstream applications.
- Developed and optimized a hotel recommendation engine utilizing POI and geospatial analytics, resulting in an IDR 8 billion increase in gross booking volume (GBV) and expanding market share by 15% within target regions.
- Streamlined flight reschedule identification process by developing automated algorithms, resulting in a 165 million IDR reduction in operational expenses and enhancing workflow efficiency by 35%, thereby decreasing manual intervention and error rates.

Sayurbox

Junior Data Scientist

Jakarta, ID

May 2021 - October 2022

- Engineered a comprehensive weekly demand forecasting model utilizing FBProphet and time series analysis, resulting in a 15% increase in prediction accuracy for over 500 SKUs and enabling proactive inventory management.
- Streamlined order preparation workflows by automating workforce scheduling processes, which resulted in a 75% reduction in labor planning time and improved response times during peak periods by 40%.
- Implemented dynamic route assignment algorithms that optimized driver deployment, decreasing idle time by 20% and increasing daily delivery capacity by 12%.

PROJECTS

Monash University

Air Quality & Pedestrian Visualization

Melbourne, AU

August 2026 - September 2025

- Analyzed and discovered the correlation between air quality indices and pedestrian foot traffic in Melbourne, revealing a 15% incline in PM10 and PM2.5 levels during the Australian summer.
- Utilized the R programming language to preprocess and clean large-scale air quality datasets, reducing data inconsistency issues by 40% and ensuring accurate visualization inputs for subsequent analysis.

University of Nottingham

Chest Disease Classification using CNN

Nottingham, UK

August 2019 - April 2020

- Developed a convolutional neural network model that achieved an 80% F1 score in classifying chest X-ray images across 10 disease categories, significantly improving diagnostic precision for respiratory conditions.
- Increased dataset variability by generating over 10,000+ augmented images, which contributed to reducing overfitting and improving the CNN's generalization capabilities across diverse chest radiograph inputs.

SKILLS & INTERESTS

Programming: Python, R, C++, SQL

Tools & Software: Pandas, Numpy, Scikit-learn, PyTorch, Tensorflow, BigQuery, Spark, Kafka, Tableau, RShiny, D3.js, Google Cloud Platform (GCP), Git/Github, Jupyter Notebook
